

## Recommitment Pledge

**“The Sanur, Karang Tangguh - Resilient Reefs Pledge 2026” - driving, rapid scaling and impact Towards 2030.** *Bali Strategy Refresh Workshop, 2026*

We, the participants and partners of the **Coral Reef Rescue Alliance**, meeting in Bali April 2026, reaffirm our shared commitment to safeguarding CRRRI priority coral reefs and the communities that depend on them.

Recognizing the accelerating threats of climate change, biodiversity loss, pollution, and unsustainable development, we recommit ourselves to a renewed strategy that matches the urgency, scale, and complexity of the challenge before us. Coral reefs are not only ecosystems of extraordinary biodiversity; they are foundations for food security, livelihoods, culture, coastal protection, and climate resilience for hundreds of millions of people.

Guided by the vision of CRRRI’s **Resilient Reefs, Resilient Communities**, we pledge to align our collective actions, investments, and influence toward a 2030 horizon that delivers measurable, lasting impact.

### Our Collective Promise

Through this recommitment, we pledge to act with urgency, collaboration, respect and integrity. We will break silos, elevate shared leadership, and hold ourselves accountable to the people and reefs we serve. Together, we will transform ambition into action—**ensuring that by 2030 & beyond coral reefs** are more resilient, communities are stronger, and a thriving future remains possible for generations to come.

*Adopted in Bali, 2026, by the Coral Reef Rescue Initiative Participants and Partners.*

**RESILIENT REEFS.  
RESILIENT COMMUNITIES.**
